

Invitation to GIS4EU presentations

www.gis4eu.eu

"Gis4eu a Cooperative project to apply the INSPIRE directive"

21-25 June 2010

Kracow, Poland

On 22nd June 2010 will be held the "Gis4eu a Cooperative project to apply the INSPIRE directive" inside the [INSPIRE Conference 2010](#) that will take place from 23rd to 25th June 2010 in Krakow, Poland.

GIS4EU Project activities focused on developing a common data model on an European scale for several of the INSPIRE Directive Annex I data themes. The project involved different types of partners, including operational users, researchers, geodata technicians and data providers, addressing different technical, organisational and operational aspects from the different points of view of the users.

The workshop will follow the same path of the activities developed during the project, summarised according to the work completed towards the end of the project, with the intention of further disseminating the results and extending the reach of the project to the SDI communities across Europe.

In particular, the work shop will present the different operational steps needed to implement the available INSPIRE data models, regarding the four themes managed by the project: administrative units, hydrography, transport networks and elevation.

The workshop, using the operational steps developed and engineered during the second year of activities, will present to the public the developed workflows, which can help users and their organisations to implement the INSPIRE Directive. The results achieved provide a clear view of the logical steps that they need to follow to implement the INSPIRE Directive at their own levels.

A dedicated speak on the "Impact analysis of the operational implementation of the INSPIRE rules in data harmonisation and aggregation: the GIS4EU case" will be held on Thursday, June 24, 2010.

The presentation will describe the methodology and the results of GIS4EU process Impact Analysis which provides a snapshot of the operational implementation of the INSPIRE rules on more than 50 datasets coming from 10 local/regional/national data providers distributed in 5 different European Countries.

The GIS4EU Project Coordinator

Dr. De Zorzi Stefania
